SUMITOMO BIORATIONAL

BoronBoost®

NUTRITION

PRODUCT BENEFITS

ENHANCED POLLINATION

Promotes pollen tube development for successful pollination and reproductive growth

IMPROVED CARBOHYDRATE MOBILITY

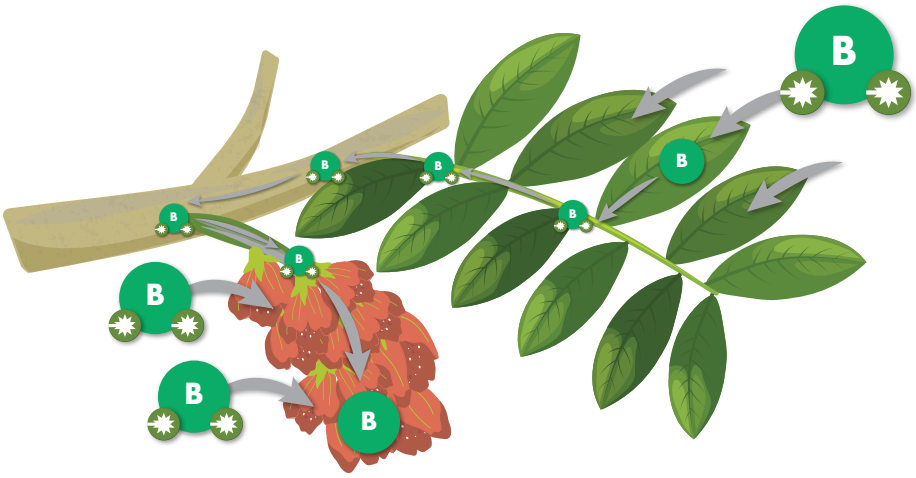

Facilitates carbohydrate movement to developing fruit, nuts, and grain

OPTIMIZED CROP FILL

Enhances carbohydrate partitioning for improved fruit, nut, and grain development

BoronBoost® is a boron product built with our Transit® biostimulant to support nutrient mobility, pollination, carbohydrate transport, and crop development.

Reproductive growth creates significant demand for boron to support pollination, carbohydrate movement, and crop fill. BoronBoost combines our Transit biostimulant with targeted boron nutrition to improve boron mobility and utilization, supporting pollen tube development and carbohydrate transport to developing fruit, nuts, and grain for improved crop development, quality, and yield potential.

When the plant transitions to utilizing stored nutrients, applications of boron support right time, right place demand.

MODE OF ACTION

Our Transit biostimulant in BoronBoost improves the mobility of boron in the xylem and phloem, helping plants make more efficient use of applied nutrition.

B Boron supports pollen tube development and successful pollination while facilitating carbohydrate movement to developing fruit, nuts, and grain.

GUARANTEED ANALYSIS

BoronBoost Foliar Guaranteed Analysis
Boron (B) 6.0%
Derived from: Boron ethanolamine.

BoronBoost Soil Guaranteed Analysis
Boron (B) 6.0%
Derived from: Boric acid.
Also contains non-plant food ingredient:
0.6% humic acids derived from Leonardite.

POWERED BY TRANSIT®

APPLICATION TYPE	USE RATE	APPLICATION TIMING
BoronBoost Foliar	0.5 – 3 qt/ac	Any time during the growing season; repeat as needed.
BoronBoost Soil	1 – 6 qt/ac	

Contact us to learn more about BorCAN Soil, our BoronBoost formulation suited for CAN-17 and CN9 compatibility.

APPLICATION NOTES

- For foliar applications, ensure thorough foliar coverage for optimal nutrient uptake, and apply under favorable growing conditions to maximize foliar absorption.
- For soil applications, apply enough water to move the product into the area of active rooting, but avoid excessive amounts that may leach.
- Time applications to support crop-specific boron demand during key reproductive growth stages.
- Conduct a standard jar test before tank mixing.
- Refer to the product labels for complete application instructions and crop-specific use directions.
