SUMITOMO BIORATIONAL

SuperSede® Corn

BIOSTIMULANT SEED TREATMENT

PRODUCT BENEFITS

BETTER GERMINATION

Improves germination rate for plant uniformity and stand count

ENHANCED GROWTH

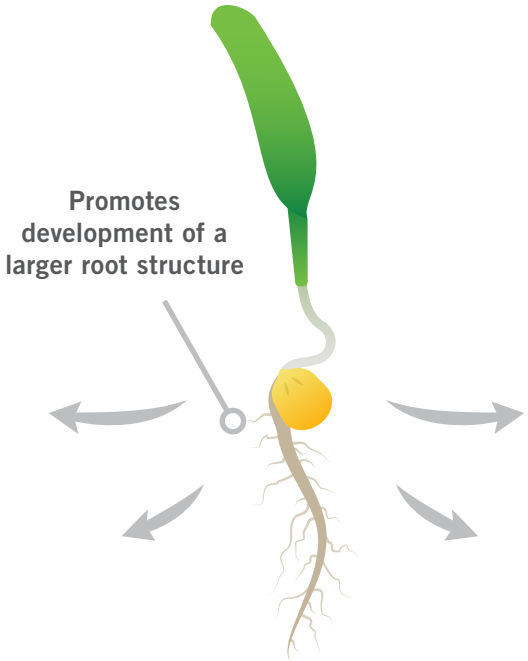

Promotes shoot growth, root establishment, and vegetative growth

TARGETED CORN NUTRITION

Provides key nutrients to support seedling growth

SuperSede® Corn is a seed treatment powered by Transit®, designed with key nutrition for corn.

Successful crop establishment begins with rapid germination and early root development; however, weather after planting does not always support vigorous early growth. SuperSede Corn combines Transit with targeted corn nutrition to improve germination, strengthen early root development, and establish a more vigorous, uniform crop stand.

MODE OF ACTION

SuperSede Corn supports the down-regulation of catabolic genes to improve germination while stimulating vigorous root growth. At the same time, Transit up-regulates auxin transport pathways, further strengthening root architecture. When combined with key nutrients for corn germination and establishment, SuperSede Corn optimizes crop performance for strong, uniform stand establishment.

GUARANTEED ANALYSIS

Boron (B) 0.5%
Manganese (Mn) 0.25%
Molybdenum (Mo) 0.0015%
Zinc (Zn) 1.5%
Derived from: Boric acid, manganese sulfate, sodium molybdate, and zinc sulfate.

POWERED BY TRANSIT®

CROP	USE RATE	APPLICATION TIMING
Corn	1 fl oz per 50 lbs	Seed Treatment

PACKAGE SIZES

- 4x1 gal
- 2x2.5 gal

APPLICATION NOTES

- Apply using seed treatment application equipment with sufficient liquid to ensure even coverage.
- Shake the bottle of SuperSede Corn well before use.
- DO NOT use treated seed for food, feed, or oil.
- Can be used with many common fungicides and insecticides.
- Compatibility: Conduct a standard jar test before mixing a slurry.
- Recommended mixing order: Water, polymers, pesticides, SuperSede Corn, fertilizers, then remaining water.
- Effects on the plant last up to 3 weeks.
